

## **Global Strategy for Plant Conservation - Targets Adopted at CBD COP 6.**

The 42 targets in the European Plant Conservation Strategy are arranged under the same five objectives as these Global targets.

### **Objective 1: Understanding and documenting plant diversity**

1. A widely accessible working list of plant species, as a step towards a complete world flora
2. A preliminary assessment of the conservation status of all known plant species, at a national, regional and international level
3. Development of models with protocols for plant conservation and sustainable use, based on research and practical experience

### **Objective 2: Conserving plant diversity**

4. At least 10 per cent of each of the world's ecological regions effectively conserved
5. Protection of 50 per cent of the most important areas for plant diversity assured
6. At least 30 per cent of production lands managed consistent with the conservation of plant diversity
7. 60 per cent of the world's threatened species conserved in situ
8. 60 per cent of threatened plant species in accessible ex situ collections, preferably in the country of origin, and 10 per cent of them included in recovery and restoration programmes
9. 70 per cent of the genetic diversity of crops and other major socio-economically valuable plant species conserved, and associated local and indigenous knowledge maintained
10. Management plans in place for at least 100 major alien species that threaten plants, plant communities and associated habitats and ecosystems

### **Objective 3 Using plant diversity sustainably**

11. No species of wild flora endangered by international trade
12. 30 per cent of plant-based products derived from sources that are sustainably managed
13. The decline of plant resources, and associated local and indigenous knowledge, innovations and practices, that support sustainable livelihoods, local food security and health care, halted

### **Objective 4: Promoting education and awareness about plant diversity**

14. The importance of plant diversity and the need for its conservation incorporated into communication education and public awareness programs
15. The number of trained people working with appropriate facilities in plant conservation increased, according to national needs, to achieve the targets of this strategy
16. Networks for plant conservation activities established or strengthened at national, regional and international levels
